

MEDOCTOR SYSTEM FEATURES AND BENEFITS FOR CLINICS/PHYSICIANS

- SPEEDS PATIENT THROUGHPUT / GATHERS MORE INFORMATION FOR CLINICS / PHYSICIANS

Patients use the Medoctor system on a PC in the clinical environment to enroll in the system, providing personal data, past medical history and vitals - then answer a series of computer-generated Onset, Body Part and Symptom questions, with simple YES or NO clicks. The interview questions are in layman's language. Enrollments average 6 to 8 minutes and interviews 4 to 6 minutes.

- IMPROVES PHYSICIAN DIAGNOSTIC ACCURACY

The Medoctor system processes the patient's input and provides an instant differential diagnosis (DDX) for the family physician, including the three most likely probabilities, as well as providing a primout of the positive and negative symptoms. The Medoctor system Version 3.0 databases contain over 838 diseases and conditions, 4,000+ evidence-based symptoms and hundreds of associated body parts. It is the most robust system of its kind and has the ability to provide DDXs, including Tuberculosis, Malaria, HIV Infection as well as conditions, such as Depression.

- CREATES AN ELECTRONIC HEALTH RECORD FOR EACH PATIENT

Each User automatically creates a personal electronic health record simply by clicking SAVE on the results page. This record is available for the clinic 24/7. The EHR can be transmitted electronically in multiple languages to other facilities and entered into the patient's EMR at a hospital.

- PROVIDES EARLY DETECTION / COST CONTAINMENT

Clearly, the earlier any disease or condition is detected, the lower the cost for Health Ministries, Insurers and Employers, as well as, alleviating patient suffering. Using the patient's time rather than physician time, the Medoctor system can ask many more symptom questions than a medical professional has time to ask. Each Medoctor DDX will average over 40 questions in advance of the patient encounter. Obviously, the more questions a patient answers, the more accurate the diagnosis.

MEDOCTOR SERVICES FOR MULTINATIONAL CORPORATIONS

- ADVANTAGES FOR THE COMPANY
Companies with operations in rural areas
Companies operating in Less Developed Countries
- ADVANTAGE FOR THE EMPLOYEE
Personal Health Record
- ADVANTAGE FOR LOCAL GOVERNMENT
Assists in building HIT infrastructure

DEVELOPMENT OF THE MEDOCTOR SYSTEM

- OUR TECHNOLOGY

MEDOCTOR has designed proprietary health software applications using revolutionary knowledge engineering which can be used by patients and health care providers alike 24 hours a day, 7 days a week. MEDOCTOR's comprehensive computer-assisted diagnostic decision support system cross-references symptoms to disease diagnostic categories, providing instantaneous differential diagnosis to patients, physicians, appropriate health maintenance organizations and health insurers anywhere in the world.

- CORPORATE VISION

MEDOCTOR envisions every individual from every walk of life, to have the ability to understand their healthcare needs and to empower those individuals by providing an affordable health assessment system and personal health record in many languages.

- MISSION

MEDOCTOR is focused on improving the delivery, efficiency and quality of healthcare throughout the world.

- SYSTEM OVERVIEW

The company has developed a health assessment record-keeping system, which is available worldwide, through the Internet. The Medoctor system is, we believe, the most advanced tool for primary care, available anywhere in the world. The Medoctor technology operates in English, Spanish, French, German, Italian and Vietnamese. All of the languages are instantly interchangeable.

Version 3.0 is currently in Alpha testing and is designed to operate on any web-enabled device, including cell phones and tablets.

- INTELLECTUAL PROPERTY

The company has received US and European Patents entitled "System and Method for Determining the Probable Existence of Disease".

- FUTURE DEVELOPMENT

The "MEDOCTOR Engine" has virtually unlimited capability to process healthcare and Medical Data. The MEDOCTOR system is customizable to allow healthcare and medical institutions throughout the world, to adapt the systems local customs and requirements.
